

## CERTIFICATIONS AND TECHNICAL SUPPORT

At **Palapas Sintéticas de México**, the quality and safety of our products result from the use of high-grade raw materials and manufacturing processes developed under strict technical standards.

Our synthetic thatch has characteristics that make it highly reliable for applications in tourist, commercial, and residential environments:

- **Complete impermeability**, preventing moisture absorption and material degradation.
- **Resistance to heat and ignition sources**, including pyrotechnic residue, glowing embers, cake sparks, and even direct exposure to a torch flame, without combustion propagation.
- **High mechanical tear resistance**, thanks to its superior thickness and the structural quality of the material.
- **High resistance to inclement weather**, maintaining its mechanical properties and appearance during long periods of exposure to sun, wind, and rain.
- **Homogeneous consistency in color and opacity**, preventing light leaks and providing a uniform appearance.
- **Manufacturing processes developed under the international standard ISO 9001:2015**, guaranteeing documented and controlled management systems that meet international standards.

These characteristics have been evaluated and validated through tests conducted by specialized public and private organizations and laboratories.
